
Short exercise

Question 1: Modern software development requires **integration of different components**.

1. Briefly describe some of the components
2. What are some of the technologies to achieve the integration of these component?
3. Integration of components make software development **complex**. Describe some of the **challenges** of software development

Question 2: Briefly describe the following terms

a. **Distributed computing**

b. **Distributed applications**

c. **Multiprocessing**

Question 3: Explain how distributed applications (or distributed computing and multiprocessing) make integrative programming important.
