
Singleton: Campus example

The diagram below shows the class Campus of a school.

Question 1

1. How many instances of Campus can you create?
2. Write the code for **Campus** (with at least 2 constructors) and a class **Tester** (to create instances of Campus)

Question 2

1. Assume the school has ONLY ONE campus. How many instances of the **campus** can your application create?
3. Modify the code in **Question 1** (2) above to create only ONE instance of Campus
