
Creating XML code in Eclipse

1. Create a new Java project called **xmlitems**
- A. Create an XML file **items.xml** in the **project folder**
 1. Right-click **xmlitems**, select New and Other
 2. In the wizard, type xml and select XML, XML file and click Next
In the new window, provide the name and extension of the file (e.g.**items.xml**)

- B. Write the XML code in **items.xml** and validate (right-click the file and select Validate)

```
<?xml version="1.0" encoding="UTF-8"?>
<Shop>
  <Item>
    <code>001</code>
    <name>Bread</name>
    <price>12.99</price>
  </Item>
  <Item>
    <code>002</code>
    <name>Rama</name>
    <price>40.99</price>
  </Item>
  <Item>
    <code>003</code>
    <name>Coke</name>
    <price>16.49</price>
  </Item>
</Shop>
```
