

Question 1

1. Write XML code (**assessment.xml**) to store at least two student records for IPRT301 assessment as follows. An **Assessment** consists of many **Student** records. Each **Student** record consists of student **id** (a **unique identifier**); student **name**; **dp** mark and **exam** mark. Use **Assessment** (**root**), **Student**, **id**, **name**, **dp** and **exam** as elements.

List of items				
Id	Name	Dp	Exam	
20220001	J May	40	40	
20220002	K Lo	50	50	
20220003	J Lulu	40	60	
20220004	CB Midas	70	70	

2. Write the XSL code in a file **assessment.xsl** to format the data in **assessment.xml** to display as shown above
3. Link the XML code in **assessment.xml** to the XSL in **assessment.xsl**
4. Run the application
5. Modify the application to displays the final mark for each student in a column "Final" after "Exam"

Question 2

1. Write XML code (**contact.xml**) to store contact details of people. **Contact** (the **root** element) consists of many **Person** objects. Each Person has **id** (a required, unique identifier), **fullname** and **phone** number. **fullname** consists of **first** and **last** names as shown below. Use **Contact** (as **root**), **Person**, **id**, **fullname**, **first**, **last** and **phone** as elements to store the contact details of at least two people.

Person

- a. id
- b. fullname
 - i. first
 - ii. last
- c. phone

The screenshot shows a web browser window titled "Contacts in PhoneBook". The address bar shows a file path. The main content area displays a table with the following data:

Id	Name	Phone	Street	City
1	K Lo	046 222 2222	11 Osmond Terrace	Grahamstown
2	J May	021 222 2222	121 Forest Drive	Cape Town

2. Write the XSL code in a file **contact.xsl** to format the data in **contact.xml** to display as shown above

3. Link the XML code in **contact.xml** to the XSL in **contact.xsl**
4. Run the application
