

TASK 2: SYSTEMATIC LITERATURE REVIEW [100 MARKS]

TEMPLATE & FORMAT		[5]
[Use the IEEE manuscript template that can be acquired through a Google search. ADICT researcher must add ALL authors, BINCT researchers must add ONLY half the number of group members (five if there are 10 in a group). Follow the same font type, spacing, paragraph indent, figure labels, table labels, and table format as demonstrated in the Friday lecture (10 April 2026). This paper must be a maximum of 11 pages]		
TITLE		[5]
[Your review topic must be structured for review purposes. An example, if your title is “Enhancing recyclable waste collection in smart cities using machine learning”. Then, your review title would be either “Recyclable waste collection approaches in smart cities: A mini-systematic review” or “A comparison of machine learning models for recyclable waste collection in smart cities: A review”. You are encouraged to consult other SLRs for ideas on rephrasing your topic.]		
ABSTRACT		[5]
Write a concise abstract with a maximum of 200 words (one paragraph)	Context	[1]
	Brief literature/problem statement/aim	[1]
	Methodology	[1]
	Evaluation criteria	[1]
	Findings and impact	[1]
KEYWORDS		[5]
[Add the same keywords you used to search for the articles, avoid using the synonyms]		
INTRODUCTION		[10]
Write a concise Introduction	Context	2
	Brief Literature/knowledge gap	3

(Max four concise paragraphs, each paragraph must consist of 6 to 9 lines)	What you intend to propose	3
	Justify why a systematic literature review	2
RESEARCH METHODOLOGY		[10]
Write a concise research methodology; this section must be introduced by at least 6 lines. What it aims to achieve, why, how, etc. [2]. Each sub-section must be one paragraph	a. Search Strategy (avoid adding keywords in this section; we already have keywords after your abstract)	2
	b. Inclusion and exclusion criteria	2
	c. Data extraction	2
	d. Research Questions	2
LITERATURE REVIEW		[25]
Write a concise literature review; this section must be introduced by at least 6 lines. What it aims to achieve, why, how, etc. Mention that it will be guided by the research questions. The review intends to review, it does NOT conclude anything. It shows patterns in terms of quantity, whether in tables, graphs, or analytics [5]. The length of the subsections will be guided by the maximum number of pages for this conference paper	a. The existing method for the <i>recyclable waste collection in smart cities</i> . This section aims to address RQ1. Add the table to support your review.	5
	b. The dataset utilized by the <i>recyclable waste collection methods</i> . This section aims to address RQ2. Add the table to support your review.	5
	c. The performance metrics utilized by the <i>recyclable waste collection methods</i> . This section aims to address RQ3. Add the table to support your review.	5
	d. The limitations for the <i>recyclable waste collection methods</i> . This section aims to address RQ4. Add the table to support your review.	5
SYNTHESIS AND ANALYSIS		[5]

[The aim of this section is to now draw conclusions about the comparison (in methods, for example), patterns (in the dataset, for example), themes (in limitations) contradiction, etc	
RESULTS AND DISCUSSIONS [What were the findings? These are the findings that must be included in your abstract. It is always easier to present the results in the form of percentages]	[5]
CHALLENGES AND OPPORTUNITIES [Choose one method, one dataset source, and one limitation that your study will focus on. Discuss how it will help you to address the problem you have identified (to come up with an effective recyclable waste collection method). This section serves as your INFORMED proposal]	[5]
SUMMARY OF ARTICLES [Summarize all the articles, categorize them based on the methods. Your table must include Methods, Author(s), Citation, Year, Area of Focus as discussed in class on Thursday (09 April 2026)]	[5]
CONCLUSION [Write one concise paragraph . Your conclusion must include the aim of your paper (the aim for a review is to review the existing approaches, it is NOT to “improve” or “enhance” or “detect” we are not there yet. That part of research will be executed next semester), what was the methodology used, what were the findings, what does your work aims to focus on (under challenges and opportunity)]	[5]
ACKNOWLEDGEMENT [This section is done to pass your gratitude to your institution for giving you a platform to acquire the skills to do research, your mentors who have been of help with guidance, the co-authors, your external editor, and your main supervisor (your lecturer) for their guidance. You mention them by name.]	[2]
LIST OF REFERENCES Please use the IEEE referencing style and make use of referencing tools such as Mendeley (download from Google), EndNote, Zotero, or any other referencing tool you know. Your list of references must correspond to the number of INCLUDED articles.	[5]
APPENDIX [Your appendix must consist of your search strategy. You must list your TITLE, your Keywords, the database used, the link to the search query, and the results (of the articles)]	[3]
