

Dear Authors,

We regret to inform you that your submission has not been accepted for inclusion to the 2025 IEEE AFRICON Conference.

Reviewer #1:

- 1. Paper ID
 - o 241
- 2. Paper Title
 - o A review of informative irrigation approaches in Agriculture: A mini-systematic review
- 3. Is the manuscript within the scope of the conference?
 - o Yes
- 4. Overall Evaluation (Please comment on originality, technical contribution and impact of the paper)
 - o The work is not original as it reviews the existing study of AI and IoT for smart irrigation without introducing a novel perspective or framework. Its technical contribution is minimal, as its findings and summary-level analysis offer limited insight for researchers in the field.
- 5. Comments to the Authors
 - o - The format is not in IEEE conference format; Title and authors writing is not correct.

- It is a scan copy not a pdf form.
- Abstract does not talk about the finding or results obtained, Looks like an introduction.
- Typos here and there, abbreviations are not defined (e.g., ALML_Model, NPK is used before being defined.)
- The tables are difficult to analyse and the Results rows are confusing. The percentages (e.g., 50%, 19.05%) in the table results lack context. 50% of what?
- The findings of Table 2 is not discussed and on page 3, below table 2, Typo, table 1 should be table 2 (supervised).
- There is no discussion about figure2.
- Page 5, subsection 6, Typo, Figure 2 should be figure 3.
- AI/ML and IoT for irrigation are extensively covered in existing literature and hence the contribution of this paper is very small. It should have more focused on critical synthesis of how chatbots improve or change irrigation management instead of treating them as an adjacent component.
- Long conclusion with table is not as per IEEE conferences,
- The paper is incomplete and the systematic review process is not clear.
- It summarizes rather than synthesizes and critiques the literature.
- 6. Comments to the Chair
 - o This paper is not suitable for publication at IEEE AFRICON at its current version and depth.
- 7. Overall confidence of the reviewer in the field
 - o High
- 8. Recommendation
 - o -1: Weak Reject

Reviewer #2:

- 1. Paper ID
 - o 241
- 2. Paper Title
 - o A review of informative irrigation approaches in Agriculture: A mini-systematic review
- 3. Is the manuscript within the scope of the conference?
 - o Yes
- 4. Overall Evaluation (Please comment on originality, technical contribution and impact of the paper)
 - o The authors proposed a systematic review of articles that use AI/ML in the agricultural research field. In their, write up, they have provided tables. The article is more on how best you can review articles that are focusing on agriculture. The idea of doing a systematic review for information collection is good.
- 5. Comments to the Authors
 - o Revised the article to improve its quality so that it can qualify to be a review paper or a survey article. The research idea is good.
- 6. Comments to the Chair
 - o The paper must not be accepted due to the following:
 - It has too many mistakes which needs to be attended
 - doesnot follow the syntax of a proper publication as under conclusion section they still discuss tables
 - Once the article has been revised, it can be submitted to any journal to be a survey article
- 7. Overall confidence of the reviewer in the field
 - o High
- 8. Recommendation
 - o -1: Weak Reject
