

TASK 4: SOLUTION SELECTION [100 MARKS]

TEMPLATE & FORMAT		[10]
[Use the DUT branded templated with FAI letterhead. Search for the FAI letterhead on PINBOARD. Use Times New Roman, font size 12, 1.5 spacing, and make headings bold. This paper must be a one-column and have a maximum of 5 pages, including the cover page with the list of group members and the list of references. Document must be a PDF, save as module code and group number e.g. RESK301 GROUP 4 OR RESK401 GROUP 4]		
TITLE		[5]
[Your topic must be structured for a complete paper. An example, “Enhancing recyclable waste collection in smart cities using machine learning”.]		
RESEARCH METHODOLOGY		[15]
Write a concise research methodology introduction; this section must be introduced by at least 6 lines. Introduce the research methodology design you will use and justify why	Context [of your study]	2
	Reflection from the literature	2
	What you intend to address	2
	Methodology you intend to utilize (e.g., DSRM)	4
PROBLEM IDENTIFICATION		[10]
Write a concise paragraph (similar to the problem identification); this section must be introduced by at least 6 lines. Mention the exact limitation your study aims to address [5].	Context [of your study]	2
	Methods [The summary of current reviewed methods]	3
	Limitation [The one you are focusing on]	2
	Statement	3

	[What you identified in the literature that needs to be done. E.g. Therefore, there is a need toin order to]	
PROPOSED SOLUTION		[10]
[What do you aim to propose as the solution? What are the objectives you will follow to solve this problem? Objectives must always be presented in bullet form, and there must be a maximum of four. Starts a sentence with “To”, e.g. • To review • To propose..... • To develop..... • To evaluate.....]		
DATA GATHERING/ACQUISITION/COLLECTION		[10]
[Choose one: Data gathering, Data acquisition, or data collection. This section aims to answer the question of: “Which dataset are we going to use to solve the problem identified?” Search for that dataset, screenshot the first 10 rows, and briefly talk about the dataset. Labelled or unlabeled, pre-processing, attributes, size, source. Write everything in the form of a concise paragraph. This is the most important section of the research methodology.]		
DEVELOPMENT/PROTOTYPE		[10]
[This section must discuss how you are planning to develop or code the solution. If you will be using machine learning, which models are you going to train, and why those models? How are you going to train the models? Which software are you going to use? Frontend? Backend? Database? Framework? And other technical details. Mention them so that anyone reading this work can implement the same solution and obtain similar results. Write a maximum of two paragraphs]		
EVALUATION CRITERIA		[10]
[Write a concise paragraph discussing how the methods are going to be evaluated. Which metrics are you going to use? If you already have a formula for those metrics, add the formula. Are you doing a comparison? Benchmarking? Or Proof of concept?]		
RESULTS COMMUNICATION		[10]

[Write one concise paragraph. Your results communication must indicate how you are planning to present them. Will you use the graphs?	
LIST OF REFERENCES Please use the DUT Harvard referencing style and make use of referencing tools such as Mendeley (download from Google), EndNote, Zotero, or any other referencing tool you know.	[10]
